The big man has consistently been voted the top overall prospect for the 2017 NBA Draft, and no matter where he is drafted, he will be a surefire hit. However, because of the way the big man has been used so far by his current team, the Philadelphia 76ers, the big man may have actually been a detriment to his own draft stock. At some point, he has to decide to be a franchise cornerstone or a high second round draft pick. In this video, DraftExpress dives into Embiid's game and talks about how it would fit into the Milwaukee Bucks, who need to replace their small ball center. On DraftExpress.com's new channel on YouTube, we will post a daily video for the next couple of months covering all aspects of the 2017 NBA Draft. Feel free to subscribe and support.Q: using a variable to change the output of a function in python I have been practicing using variables and functions to make python code more efficient. I am now in a situation where I need to use a variable to change the output of a function. I want to be able to do the following: #letter.py def my_func(): return "This is an example" def my_other_func(): return "This is another example" a = "This is my new variable" for word in a: print word + my_func() print word + my_other_func() Which would give me the output: This is my new variable This is an example This is my new variable This is another example My understanding is that I cannot use variables to create functions and that you need to use the exec() function to do this. Can someone tell me how to fix this? A: you should not be using 82157476af
